

Biometric Attendance System

Circuit Block Daigram

INTRODUCTION

In the World of Technology, Biometrics plays an effective role in identifying Human beings.

Biometrics is the emerging technology used for identification. Biometric refers to automatic identification of a person based on biological characters such as finger print, iris, facial recognition, etc. In this article finger print based attendance system is proposed.

Attendance in educational institutions, industries will require more paper work and time. To reduce this, automatic attendance system using finger print was developed. We also call it as Biometric Attendance System

The main aim of this circuit is to take the attendance and display when requested. Finger print identification is based on the fact that no two persons will have the same finger print in this world. Finger print module differentiates between two fingers based on the ridges and valleys on finger print.
